Experiment 8: Servlet Filter for Request Logging and IP Validation

Course: Advanced Java Programming Laboratory [23CS3504]
Category: Experiments / Practicals | Experiment #8 | Academic Year: 2026-27

---

1. Overview & Objective:

Construct a reusable intercepting filter that validates client IP address and logs execution timings.

2. Practical Tasks & Verification Steps:

1. Create class LoggingFilter implementing javax.servlet.Filter interface and overriding doFilter .
2. Capture request start timestamp, remote IP address, requested URI, and HTTP method.
3. Forward request along chain with chain.doFilter request, response and measure elapsed processing time.
4. Implement IP whitelist block rejecting unauthorized client subnet IPs with HTTP 403 Forbidden.

Submission Guidelines & Verification:

This document verifies end-to-end PDF storage, preview, and download for CampusNotes.
